

Bountiful™ Baby Blueberry
Vaccinium corymbosum 'FC13-044'

Height: 3 feet

Spread: 3 feet

Sunlight: ○ ●

Hardiness Zone: 5

Group/Class: Highbush Blueberry

Description:

A very compact selection for warmer climates, producing a bumper crop of small, flavorful berries; attractive dark green foliage with a lovely red fall color; blueberries need highly acidic soil, perfect drainage and mulch; plant with peat moss

Edible Qualities

Bountiful Baby Blueberry is a small shrub that is commonly grown for its edible qualities, although it does have ornamental merits as well. It produces small clusters of navy blue round berries with a silvery blue blush which are usually ready for picking in early summer. The berries have a sweet taste and a juicy texture.

The berries are most often used in the following ways:

- Fresh Eating
- Cooking
- Baking
- Preserves

Features & Attributes

Bountiful Baby Blueberry features dainty clusters of white bell-shaped flowers with shell pink overtones hanging below the branches in mid spring, which emerge from distinctive red flower buds. It has dark green deciduous foliage which emerges red in spring. The glossy pointy leaves turn an outstanding red in the fall. It features an abundance of magnificent navy blue berries with silvery blue blush in early summer.

This is a multi-stemmed deciduous shrub with an upright spreading habit of growth. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition. This is a relatively low maintenance plant, and usually looks its best without pruning, although it will tolerate pruning. It is a good choice for attracting birds to your yard. It has no significant negative characteristics.

Aside from its primary use as an edible, Bountiful Baby Blueberry is suitable for the following landscape applications;

- General Garden Use
- Orchard/Edible Landscaping
- Container Planting

Planting & Growing

Bountiful Baby Blueberry will grow to be about 3 feet tall at maturity, with a spread of 3 feet. It tends to be a little leggy, with a typical clearance of 1 foot from the ground. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 30 years. This variety requires a different selection of the same species growing nearby in order to set fruit.

This shrub is quite ornamental as well as edible, and is as much at home in a landscape or flower garden as it is in a designated edibles garden. It does best in full sun to partial shade. It does best in average to evenly moist conditions, but will not tolerate standing water. To help this plant achieve its best flowering performance, periodically apply a flower-boosting fertilizer from early spring through into the active growing season. It is very fussy about its soil conditions and must have sandy, acidic soils to ensure success, and is subject to chlorosis (yellowing) of the foliage in alkaline soils. It is quite intolerant of urban pollution, therefore inner city or urban streetside plantings are best avoided, and will benefit from being planted in a relatively sheltered location. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This is a selection of a native North American species.

Bountiful Baby Blueberry is a good choice for the edible garden, but it is also well-suited for use in outdoor pots and containers. With its upright habit of growth, it is best suited for use as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. It is even sizeable enough that it can be grown alone in a suitable container. Note that when grown in a container, it may not perform exactly as indicated on the tag - this is to be expected. Also note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
